This document demonstrates the features of unifying plots in **pander**. First, if you do not want to deal with styling each of your images, just activate it: `evalsOptions('graph.unify', TRUE)`.

Note: please install `lattice` and `ggplot2` on your computer prior to trying to run all examples of this document.

Options

There are a bunch of options you might want to check out, these are:

- `graph.nomargin`
- `graph.fontfamily`
- `graph.fontcolor`
- `graph.fontsize`
- `graph.grid`
- `graph.grid.minor`
- `graph.grid.color`
- `graph.grid.lty`
- `graph.bboxes`
- `graph.legend.position`
- `graph.background`
- `graph.panel.background`
- `graph.colors`
- `graph.color.rnd`
- `graph.axis.angle`
- `graph.symbol`

Find more details on [pander's homepage](#).

Default options

Not touching the above ones, let us check out how different plots look like by calling `base R` graphing function, `lattice` or `ggplot2`!

Histogram

Base R plot

WARNING¹

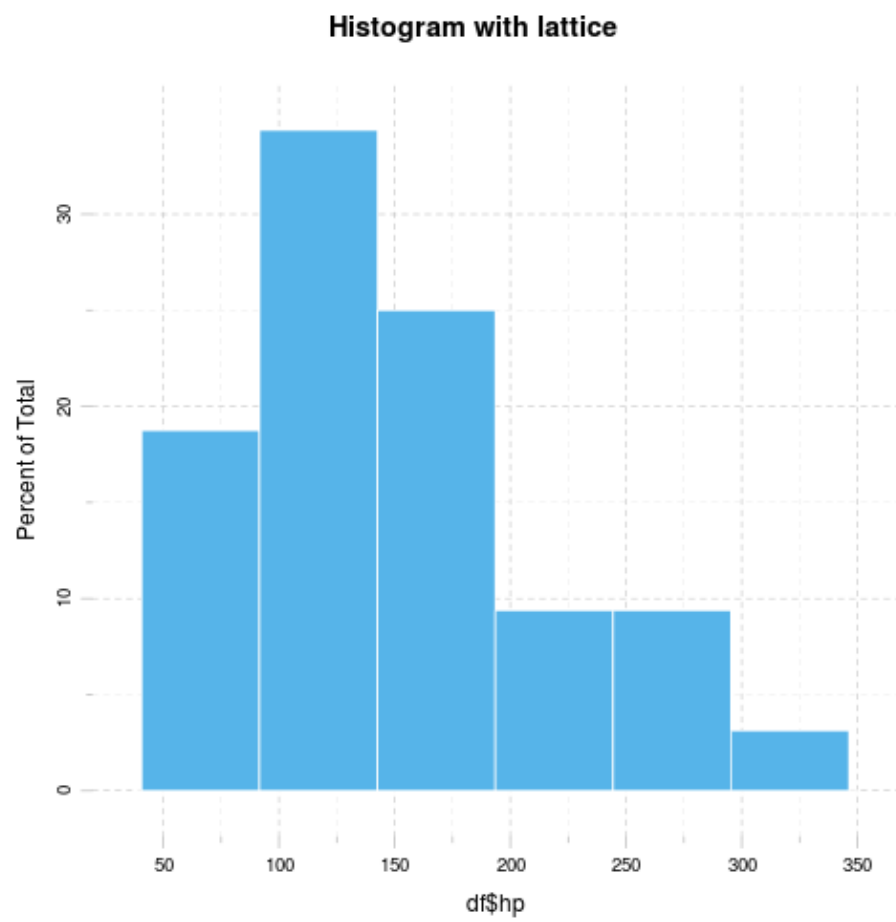

Figure 1:

`lattice`

`ggplot2`

Figure 2:

¹Applying default formatting to image is somehow compromised (the result could differ from what you specified in `panderOptions`). Hints: printing `lattice/ggplot2` is not needed and tweaking `base` plots with `par` might have some side-effects!

Barplot

Base R plot

WARNING²

Figure 3:

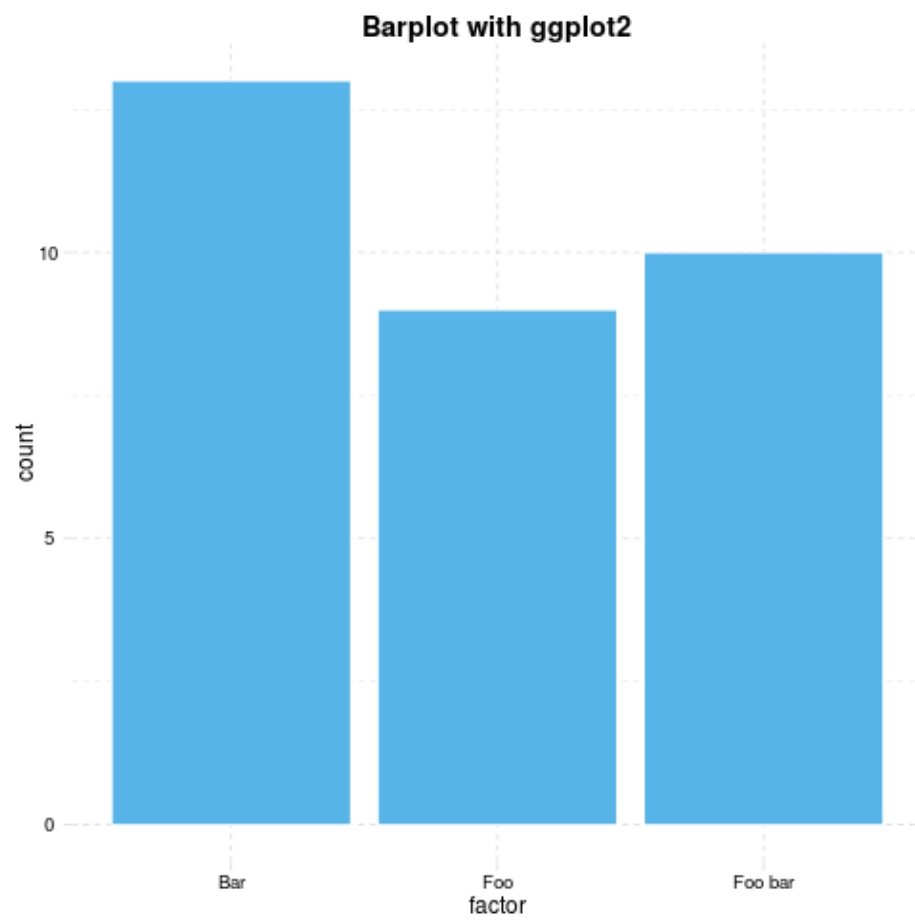

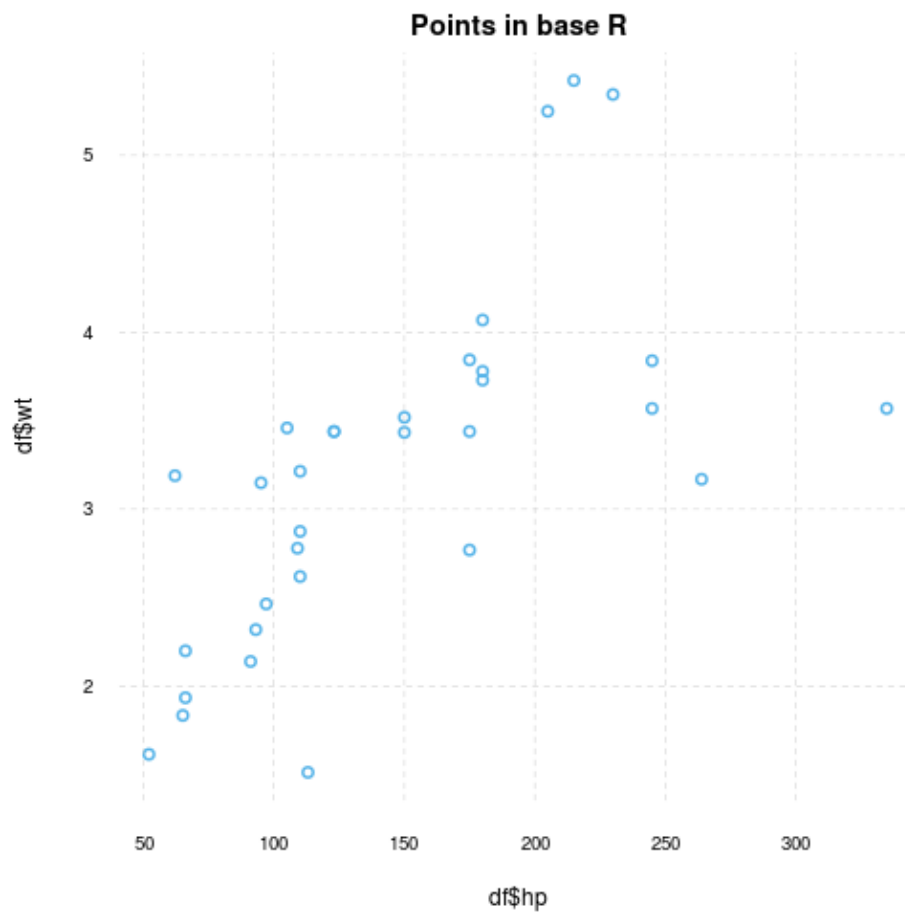

Figure 4:

`lattice`

`ggplot2`

Points

Base R plot

WARNING³

²Applying default formatting to image is somehow compromised (the result could differ from what you specified in `panderOptions`). Hints: printing `lattice/ggplot2` is not needed and tweaking `base` plots with `par` might have some side-effects!

³Applying default formatting to image is somehow compromised (the result could differ from what you specified in `panderOptions`). Hints: printing `lattice/ggplot2` is not needed and tweaking `base` plots with `par` might have some side-effects!

lattice

Figure 5:

ggplot2

Grouped plot

Base R plot

I have no idea how to do that besides manually adding `points`.

Figure 6:

Figure 7:

`lattice`

`ggplot2`

Figure 8:

Facets

Base R plot

I have no idea how to do that besides `par(mfrow=c(foo, bar))`.

Figure 9:

lattice

ggplot2

ggplot2

Custom options

Below you can find some images generated by the exact same commands but with some modified `panderOptions`:

```
panderOptions('graph.fontfamily', "Comic Sans MS")  
panderOptions('graph.fontsize', 18)
```

Figure 14:

```

panderOptions('graph.fontcolor', 'blue')
panderOptions('graph.grid.color', 'blue')
panderOptions('graph.axis.angle', 3)
panderOptions('graph.bboxes', T)
panderOptions('graph.legend.position', 'top')
panderOptions('graph.colors', rainbow(5))
panderOptions('graph.grid', FALSE)
panderOptions('graph.symbol', 22)

```

Histogram

Base R plot

Figure 15:

`lattice`

Figure 16:

`ggplot2`

Barplot

Base R plot

Yeah, the “Foo bar” label is cropped. We need a custom `mar` option here:

But wait, we lost the color! Right: unfortunately coloring base R plots is really hackish, `pander` is adding the `col` attribute to the calls. If you start to tweak `par` in a chunk, you should prepare to some unwanted side-effects. Solution:

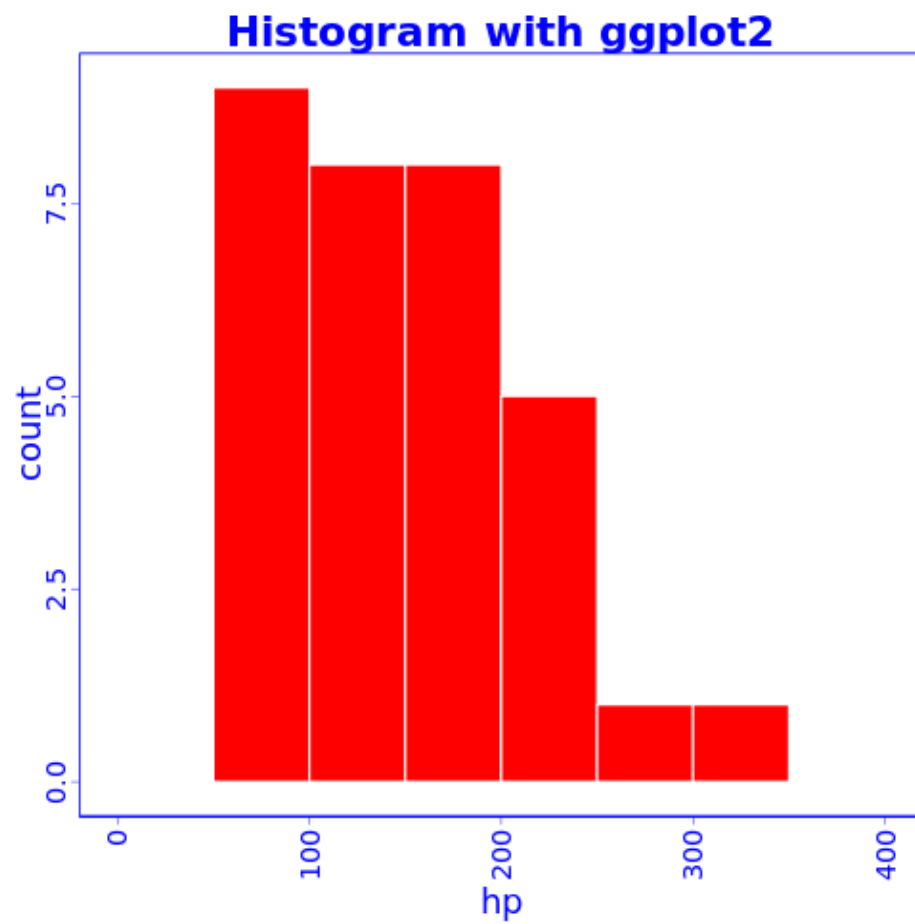

Figure 17:
